CCTV Surveillance System

Advanced surveillance systems for commercial and residential areas are designed to meet complex security challenges. Available for commercial buildings and properties as well as residential properties, these user-friendly systems feature the latest in surveillance technology for enhanced security in a localized place.

THE TRUSTON DIFFERENCE

At TrustOn, we help build, connect, power and protect valuable assets and critical infrastructures. From enterprise networks to industrial support and supplies to video surveillance applications and electric power transmission and distribution, we offer full-line solutions—and intelligence—that create reliable, resilient systems that can sustain your business and community. Through our unmatched global distribution network, supply chain management expertise and technical know-how, we drive efficiency and effectiveness to benefit your bottom line.

SECURITY CHALLENGES

ENTERPRISE SECURITY

The convergence of physical and logical security is redefining how enterprises approach safety in and around their workplaces. Moving from a reactive response to predictive mitigation, the ability to integrate with other systems for maximum operational control and faster and more reliable responses based on information gained in real-time is revolutionizing security systems. But it isn't without cost: increased usage and demand for network bandwidth, greater dependency on the physical cabling infrastructure and multiple, often disparate systems residing on and maximizing the capabilities of a single network — leaving no room for network error.

protecting your home

CCTV SURVEILLANCE

Systems we provide helps you keep an eye on your employees, workers and secure your environment. Although you insure the contents of your home, office, hotel etc. some of your possessions may be irreplaceable so the best insurance you can have against them being stolen is a burglar alarm or CCTV system that makes your house, office in your area as secure as possible. So whenever you leave your home for work, a weekend away or for your annual family holiday, at least you will have peace of mind that your burglar alarm or CCTV system is protecting your home and all its contents. Not only will these systems serve as a deterrent to prospective burglars, the burglar alarm will draw attention to attempted forced entry and the CCTV camera will capture the essential evidence.

Before we install one of our burglar alarm or CCTV systems the service starts with an in-depth survey and risk assessment of your property all at no costs and with no obligation.

FIRE ALARM SYSTEM

We offer various types of Fire Alarm System which warns you at times of fire occurs, and prevents you from major loss. A fire alarm system is number of devices working together to detect and warn people through visual and audio appliances when smoke, fire ,carbon monoxide or other emergencies are present. These alarms may be automatically from smoke detectors and heat detectors or may also be activated via manual fire alarm activation devices such as manual call points or pull stations. Alarms can be either motorized bells or wall mountable bells or wall mountable sounders or horns. They can also be speaker strobes which sound an alarm, followed by a voice evacuation message which warns people inside the building not to use the elevators.

BIOMETRIC SECURITY

Biometric security is a security mechanism used to authenticate and provide access to a facility or system based on the automatic and instant verification of an individual's physical characteristics. Because biometric security evaluates an individual's bodily elements or biological data, it is the strongest and most foolproof physical security technique used for identity verification. Biometric security is mainly implemented in environments with critical physical security requirements or that are highly prone to identity theft. Biometric security-based systems or engines store human body characteristics that do not change over an individual's lifetime. These include fingerprints, eye texture, voice, hand patterns and facial recognition. An individual's body characteristics are pre-stored in a biometric security system or scanner, which may be accessed by authorized personnel. When an individual walks into a facility or tries to gain access to a system, the biometric scanner evaluates his/her physical characteristics, which are matched with stored records. If a match is located, the individual is granted access.

CAMPUS AND CITYWIDE SECURITY

Managing security for one building is difficult. Managing security for campus-like environments with several buildings, open areas, underground areas and remote buildings significant organizational and resource challenge. From homes, hospitals and schools to city centers, retail parks and office complexes, managing security from the perimeter to the interior, either on-site or remotely, requires a combination of integrated technology and technical know-how.

GATE AUTOMATION & BOOM BARRIERS

An Automated gate system allows only the key holders to unlock the gate. This leads to a decreased risk of home invasion. Gate automation is now commonly accepted as one of the best options to secure your property. Automatic Gates offer convenience, security, and also add value to any property. Most people report that once they have installed automatic gates they feel more secure (especially at nights), that they are delighted with the ease of operation, and also that their property feels more exclusive. In effect you move your front door to beside the roadway. This deters unwanted callers and potential burglars who will not want to park visibly on the road while they enter your premises. A benefit is that the property does not look especially security conscious as normal gates are simply closed. The gates also keep your dogs in (or out as the case may be!) and stop you worrying where your offspring are playing.

Barrier gates are one of the most effective types of automation for controlling the vehicle traffic in parking lots, private entrances and reserved apartment complex areas

HOW WE CAN HELP

TrustOn's network of highly trained security specialists is ready to help you make informed decisions about the vast product offerings available in today's rapidly changing security marketplace.

TrustOn provides complete security solutions from the industry's leading manufacturers. With thousands of products across all categories, TrustOn has the broadest product offering to fit your current and future security needs.

TRUSTON TECHNICAL EXPERTISE

TECHNOLOGY SUPPORT SERVICES

TrustOn's Technology Support Services consists of specialists and technical experts with years of experience who guide the proper selection of products and solutions to maintain system reliability and longevity. By staying active in industry groups and associations, our technical staff maintains contact with top industry engineers and keeps current on the latest technical developments.

CUSTOMER TRAINING

TrustOn has a long tradition of providing training and learning opportunities for dealers, integrators, consultants and our mutual customers. We pride ourselves on our knowledge and expertise within the network infrastructure, security, wireless and wire and cable industries. We continually invest in the professional development and knowledge of our employees who receive ongoing, extensive training on new products, technologies, applications and market trends. Up-to-date market, standards and technology information and interpretation.

- SOUND AND MASS NOTIFICATION (AV SYSTEM)
- HOME AUTOMATION
- ELECTRIC FENCING

About Us:

TrustOn Company boasts five years of extensive expertise in low voltage systems, covering a wide spectrum of services including Networking IT, CCTV, background music, AV systems, Access Control and Duress Alarm, Intrusion systems, and Fire Alarm Systems. Our team comprises seasoned professionals with a high level of proficiency in their respective domains. We pride ourselves on delivering top-notch solutions tailored to our clients' needs, ensuring efficiency, reliability, and peace of mind.
